Consumption Minimization Jan 10 2022 The merits of coasting in neutral in passenger vehicles have been explored in this thesis. It has been compared against the advantages of In-gear coasting and the Deceleration Fuel Cut off prevalent in all passenger vehicles today. Also the utilization of driver assistant sensors - RADAR, camera and GPS to expand the opportunities of coasting and also safety has been discussed. Development of a platform vehicle which has shift by wire to evaluate fuel saving in the real world. A longitudinal simulator has been developed which incorporates the difference in coasting performance for in gear and neutral to support in developing algorithms before testing in the real world. An algorithm to detect obstacles in the lane of the vehicle has also been developed.
