K-pop (Korean popular music) reigns as one of the most popular music genres in the world today, a phenomenon that appeals to listeners of all ages and nationalities. In *Soul in Seoul: African American Popular Music and K-pop*, Crystal S. Anderson examines the most important and often overlooked aspect of K-pop: the music itself. She demonstrates how contemporary K-pop references and incorporates musical and performative elements of African American popular music culture as well as the ways that fans outside of Korea understand these references. K-pop emerged in the 1990s with immediate global aspirations, combining musical elements from Korean and foreign cultures, particularly rhythm and blues genres of black American popular music. Korean solo artists and groups borrow from and cite instrumentation and vocals of R&B genres, especially hip-hop. They also enhance the R&B tradition by utilizing Korean musical strategies. These musical citational practices are deemed authentic by global fans who function as part of K-pop's music press and promotional apparatus. K-pop artists also cite elements of African American performance in Korean music videos. These disrupt stereotyped representations of Asian and African American performers. Through this process K-pop has arguably become a branch of a global R&B tradition. Anderson argues that Korean pop groups participate in that tradition through cultural work that enacts a global form of crossover and by maintaining forms of authenticity that cannot be faked, and furthermore propel the R&B tradition beyond the black-white binary. This first English translation illuminates Hegelianism's most obscure dialectical synthesis: the relation between the phenomenology and the logic. This book is essential for understanding the development of French thought in this century. I was born in Jarabina in Northeastern Slovakia in 1939, a town of approximately 280 homes founded in 1329. The town consisted of private homes, a church, a school (up to the 6th grade) and a general store with a bar and a dance hall for the town's use for weddings and dances on special holidays. I was born in 1939 at the start of World War II. This was written because of the urging of my children without whose encouragement, it would not have been written. From personal loss to phantom diseases, *The Empathy Exams* is a bold and brilliant collection, winner of the Graywolf Press Nonfiction Prize A Publishers Weekly Top Ten Essay Collection of Spring 2014 Beginning with her experience as a medical actor who was paid to act out symptoms for medical students to diagnose, Leslie Jamison's visceral and revealing essays ask essential questions about our basic understanding of others: How should we care about each other? How can we feel another's pain, especially when pain can be assumed, distorted, or performed? Is empathy a tool by which to test or even grade each other? By confronting pain—real and imagined, her own and others'—Jamison uncovers a personal and cultural urgency to feel. She draws from her own experiences of illness and bodily injury to engage in an exploration that extends far beyond her life, spanning wide-ranging territory—from poverty tourism to phantom diseases, street violence to reality television, illness to incarceration—in its search for a kind of sight shaped by humility and grace. Professionelle elektronische Ausgabe erhältlich direkt bei <http://diestel-graph-theory.com/german/Profi.html> Detailliert und klar, sowie stets mit Blick auf das Wesentliche, führt dieses Buch in die Graphentheorie ein. Zu jedem Themenkomplex stellt es sorgfältig die Grundlagen dar und beweist dann ein oder zwei tiefere typische Sätze, oftmals ergänzt durch eine informelle Diskussion ihrer tragenden Ideen. Es vermittelt so exemplarisch die wichtigsten Methoden der heutigen Graphentheorie, einschließlich moderner Techniken wie Regularitätslemma, Zufallsgraphen, Baumzerlegungen und Minoren. Aus den Besprechungen: "Eine hervorragende und mit größter Sorgfalt geschriebene Einführung in die moderne Graphentheorie, die sich in den Kanon der prägenden Lehrbücher einreihen wird. Vorbehaltlos zu empfehlen." DMV-Jahresbericht "Ein Höhepunkt ist das Kapitel zur Minorentheorie von Robertson und Seymour: mit Abstand die beste in der Literatur zu findende Darstellung." Mathematika „Das Buch wurde enthusiastisch aufgenommen – und hat es allemal verdient. Eine meisterhaft klare Darlegung der modernen Graphentheorie." ICA Bulletin "Fantastisch gelungen ... ein verdammt gutes Buch." MAA Reviews "Tief, klar, wunderbar. Ein anspruchsvolles Buch aus dem Herzen der Graphentheorie, voll von Tiefe und Integrität." SIAM Review While researching in Nantes, a port city enriched by the slave trade, celebrated French novelist Fabienne Kanor came across a chilling report written in 1774 by the commander of a slave ship, *Le Soleil*. Captain Louis Mosnier recounted the loss of valuable "cargo" when fourteen African women escaped from the ship's hold to leap overboard rather than face enslavement. Half of them drowned or were eaten by sharks. From this tragic incident, Kanor has composed a powerful, polyphonic novel in which each woman tells her own vivid story. Their disparate lives from differing cultures, conditions, and perspectives intersect through their violent mistreatment, profound sense of disorientation, and collective act of resistance. These intertwined narratives reveal the brutalizing effects of slavery, not only on the victim but also on the oppressor: the master can no more escape its dehumanizing effects than can the slave. *Aretism: An Ancient Sports Philosophy for the Modern Sports World* provides a tripartite model of sports ethics founded on ancient Greek principles and focused on personal, civic, and global integration. Heather Reid and Mark Holowchak apply these concepts as a golden mean between the extremes of the commercialist and recreational models of competition. This treatment is most applicable to students and academics concerned with

the philosophy of sport, but will also be of interest to those in sports professions. Faith and Health examines controversial issues in medical ethics such as embryo stem cell research, the face transplant, cyborgs and the human and physician assisted suicide. Those struggling with such confusing and controversial subjects will appreciate the insights from ethics, theology, and law the author brings together. Here is guidance for personal or social responses to questions in medicine that affect us all. A textbook that approaches modern macroeconomics through its microeconomic foundations, with an emphasis on financial market connections and policy applications. The modern study and analysis of macroeconomics begins by considering how microeconomic units—consumers and firms—make decisions, and then investigates how these choices interact to yield economy-wide outcomes. This innovative textbook takes this “modern” approach, teaching macroeconomics through its microeconomic foundations. It does so by adopting the representative agent paradigm. By modeling the representative consumer and the representative firm, students will learn to describe macroeconomic outcomes and consider the effects of macroeconomic policies. Unique in its coverage of monopolistic competition, financial markets, and the interaction of fiscal and monetary policy, Modern Macroeconomics is suitable for use in intermediate undergraduate, advanced undergraduate, and graduate level courses. The book first introduces the building blocks of macroeconomics, the heart of which is the representative consumer. It goes on to offer a brief history of macroeconomic thought, including supply-side economics, the Phillips curve, and the New Keynesian framework. It then covers two policy applications, monetary policy and the interaction of monetary and fiscal policy; optimal policy analysis for both the flexible price and the rigid price case; long-run steady states, treating the Solow growth framework and the neoclassical growth model; a search-and-matching framework for the analysis of unemployment; and the application of the tools of modern macroeconomics to “open economy,” or international macroeconomics. End-of-chapter problem sets enable students to apply the concepts they have learned. A separate Solutions Manual will be available for students to purchase. Teaching materials, including complete solutions and slides, will be available to qualified instructors. Creative Boot Camp is a 30-day creative training program that will increase the quantity and quality of your ideas. The book begins by exploring what creativity is and isn't, how we can train ourselves to improve our own ideation, and what steps we need to take to generate more ideas and better ideas for our creative selves, our creative projects, our creative businesses, and our creative lives. Like any muscle, creativity requires repetitive and challenging exercise to grow. The 30-day program provides an escalation of creative exercises that test our problem-solving prowess and train us to overcome the obstacles that inhibit ideation. The program tests regularly, both in idea quantity and quality, to ensure we are on track with our boot camp goals. But unlike the gym, these exercises aren't to be dreaded. They are light, fun, and take 10-15 minutes max. By the end of the 30-day boot camp, readers will see noticeable improvement in the quantity and quality of their ideas. This book is a complete introduction to the power of R for marketing research practitioners. The text describes statistical models from a conceptual point of view with a minimal amount of mathematics, presuming only an introductory knowledge of statistics. Hands-on chapters accelerate the learning curve by asking readers to interact with R from the beginning. Core topics include the R language, basic statistics, linear modeling, and data visualization, which is presented throughout as an integral part of analysis. Later chapters cover more advanced topics yet are intended to be approachable for all analysts. These sections examine logistic regression, customer segmentation, hierarchical linear modeling, market basket analysis, structural equation modeling, and conjoint analysis in R. The text uniquely presents Bayesian models with a minimally complex approach, demonstrating and explaining Bayesian

methods alongside traditional analyses for analysis of variance, linear models, and metric and choice-based conjoint analysis. With its emphasis on data visualization, model assessment, and development of statistical intuition, this book provides guidance for any analyst looking to develop or improve skills in R for marketing applications. A brilliant transplant surgeon brings compassion and narrative drama to the fearful reality that every doctor must face: the inevitability of mortality. "Uncommonly moving ... A revealing and heartfelt book." —Atul Gawande, #1 New York bestselling author of *Being Mortal* When Pauline Chen began medical school, she dreamed of saving lives. What she could not predict was how much death would be a part of her work. Almost immediately, she found herself wrestling with medicine's most profound paradox—that a profession premised on caring for the ill also systematically depersonalizes dying. *Final Exam* follows Chen over the course of her education and practice as she struggles to reconcile the lessons of her training with her innate sense of empathy and humanity. A superb addition to the best medical literature of our time.

During the 90s robust control theory has seen major advances and achieved a new maturity, centered around the notion of convexity. The goal of this book is to give a graduate-level course on this theory that emphasizes these new developments, but at the same time conveys the main principles and ubiquitous tools at the heart of the subject. Its pedagogical objectives are to introduce a coherent and unified framework for studying the theory, to provide students with the control-theoretic background required to read and contribute to the research literature, and to present the main ideas and demonstrations of the major results. The book will be of value to mathematical researchers and computer scientists, graduate students planning to do research in the area, and engineering practitioners requiring advanced control techniques. The NYSTCE pedagogical exams are designed according to the Constructivist Learning Theory.
