Concerned with various modes of poetry and drama, it also examines the

cross-pollination that can occur between these modes, focusing on a range of core texts including Mallarmé's *Igitur* and *Un Coup de dés*; Apollinaire's 'Zone' and various of his calligrammes; Maeterlinck's early one-act plays: *L'Intruse*, *Les Aveugles*, and *Intérieur*; and Jarry's *Ubu roi* and *César-Antechrist*. The poetic and dramatic practices of these four authors are assessed against the broader cultural and philosophical contexts of the fin de siècle. The fin de siècle witnessed a profound epistemological shift: the Newtonian-Cartesian paradigm, increasingly challenged throughout the nineteenth century, was largely dismantled, with ramifications beyond physics, philosophy, and psychology. Chapter 1 introduces three foundational notions—Newtonian absolute space, the unitary Cartesian subject, and subject-object dualism—that were challenged and ultimately overthrown in turn-of-the-century science and art. Developments in theatre architecture and typographic design are examined against this philosophical backdrop with a view to establishing a diachronic and interdisciplinary framework of the authors in question. Chapter 2 focuses on the spatial dimension of Mallarmé's *Un Coup de dés* and Apollinaire's calligrammes—works which defamiliarise page-space by undermining various (naturalised) conventions of paginal configuration. In Chapter 3, the notion of liminality is implemented in an analysis of character and diegetic space as constructed in Jarry's *Ubu roi* and Maeterlinck's one-acts. Chapters 4 and Chapter 5 undertake a more abstract investigation of parallel

inverse processes—the subjectivisation of space and the spatialisation of the subject—manifest not only in the works of Mallarmé, Maeterlinck, Apollinaire, and Jarry, but in the period's poetry and drama more generally. Jan. issues, 1923-29, and Dec. issues, 1929-30, are each in two sections, section 2 containing the Transactions of the American Association for Thoracic Surgery, 5th-13th, 1922-30. Although a useful and important tool, the potential of mathematical modelling for decision making is often neglected. Considered an art by many and weird science by some, modelling is not as widely appreciated in problem solving and decision making as perhaps it should be. And although many operations research, management science, and optimization books touch on modelling techniques, the short shrift they usually get in coverage is reflected in their minimal application to problems in the real world. Illustrating the important influence of modelling on the decision making process, *Optimization Modelling: A Practical Approach* helps you come to grips with a wide range of modelling techniques. Highlighting the modelling aspects of optimization problems, the authors present the techniques in a clear and straightforward manner, illustrated by examples. They provide and analyze the formulation and modelling

of a number of well-known theoretical and practical problems and touch on solution approaches. The book demonstrates the use of optimization packages through the solution of various mathematical models and provides an interpretation of some of those solutions. It presents the practical aspects and difficulties of problem solving and solution implementation and studies a number of practical problems. The book also discusses the use of available software packages in solving optimization models without going into difficult mathematical details and complex solution methodologies. The emphasis on modelling techniques rather than solution algorithms sets this book apart. It is a single source for a wide range of methods, classic theoretical and practical problems, data collection and input preparation, the use of different optimization software, and practical issues of modelling, model solving, and implementation. The authors draw directly from their experience to provide lessons learned when applying modelling techniques to practical problem solving and implementation difficulties.
