Calculations with Complex Numbers Workbook Jul 20 2020 Complex numbers are written in  $a+bi$  form, where  $a$  and  $b$  are real numbers, and  $i$  is the imaginary unit, which is defined as the square root of negative one. The Calculations with Complex Numbers Workbook is a resource for Algebra 2 and Precalculus students to practice doing calculations in order to simplify complex number expressions and to write the answer in  $a+bi$  form. This workbook does not contain any word problems. There are seven sections in this workbook. Example problems

with step-by-step solutions precede each type of problem for sections one through six. Students should study these examples before starting the problems. Section seven contains the step-by-step solutions for all problems that students should use to check their work and correct any mistakes that were made. This workbook contains a total of 108 problems. This does not include the example problems. Section 1 begins with problems for students to practice simplifying powers of  $i$  then use this skill to simplify expressions with various powers of  $i$  and write the expression in  $a+bi$  form. In Section 2 students do problems where they have to add, subtract, and multiply complex numbers and write the answer in  $a+bi$  form. Section 3 includes problems where students have to write the conjugate of a complex number. Then students determine if a given complex number is a solution of a quadratic equation with real number coefficients. If it is a solution, students are then asked to write the other solution of the equation, which is the conjugate of the given complex number. In Section 4 students divide complex numbers and write the expression in  $a+bi$  form. In order to do these problems, students multiply the denominator by its conjugate. In Section 5 students simplify problems that combine of any of the four operations with complex numbers: addition, subtraction, multiplication, and division and write the answer in  $a+bi$  form. Section 6 contains problems where students solve quadratic equations and write the answer in  $a+bi$  form. Finally, Section 7 contains the step-by-step solutions for the 108 problems in this workbook.

Algebra 1 Single Variable Linear Equations Workbook Dec 25 2020 DESCRIPTION The ALGEBRA 1 SINGLE VARIABLE LINEAR EQUATIONS WORKBOOK is a resource that students can use to practice applying the properties, concepts, and computational techniques that are used to solve one-step, two-step, three-step, and multiple-step single variable linear equations. This workbook contains examples of step-by-step solutions for these types of equations as reference for students. This workbook also contains a review of the Commutative Properties of Addition and Multiplication, Associative Properties of Addition and Multiplication, the Additive Inverse Property, the Multiplicative Inverse Property, the Subtraction Property, the Identity Properties of Addition and Multiplication, and the Distributive Property of Multiplication. Additionally, this workbook provides examples of equations that are conditional, an identity, and a contradiction. There are step-by-step solutions for every problem in this workbook. This enables students to verify their work and solutions, and correct any mistakes. If students adhere to this process diligently, they should develop confidence in their abilities to solve the types of single variable linear equations. HOW TO USE THIS WORKBOOK As students work their way through the different

types of equations in this workbook, they may find some of the equations a bit of a challenge to solve. This is intentional so students get practice in solving various complex problems. If they get stuck on a problem, they can take a quick look at the solutions for the next step in how to proceed. Then, they should go back to the problem and keep working on it until it's finished. Afterwards, they should check their work and answer. If students can do the majority of these challenging problems correctly on their own, they can feel a sense of accomplishment knowing that they solved difficult problems. Note: These problems will definitely improve their computational skills if they minimize their use of calculators. APPLICATION

PROBLEMS This workbook contains a total of 147 problems. The last 37 problems are word problems; twelve which ask students to find a number under a given set of conditions. Some problems are percentage problems and distance problems. There is a pair of word problems where students are asked to convert temperature given in degrees Celsius to degrees Fahrenheit, and vice versa. There are other word problems where students have to determine how to use the information in the problem to substitute for one or multiple variables to reduce the equation to a single variable linear equation. ABOUT THE AUTHOR Norman Balason is a high school math teacher. He is in his 27th year of teaching high school math classes. During his teaching career he has taught Pre-Algebra, Algebra 1, Geometry, Algebra 2, and Pre-Calculus.
