A detailed Table of Contents so you can use the book as a reference manual as needed. Appendices offering recommendations on apps, shortcuts to quick iPhone functions, and Siri examples. Very detailed instructions on how to setup your extremely important Apple ID, and how to use your Apple ID effectively "PCCF+ Version 5 consists of a SAS control program and a series of reference files derived from the most recent Statistics Canada Postal Code Conversion File (PCCF) and a 2006 postal code population weight file (WCF). It automatically assigns a full range of geographic identifiers (down to

dissemination area, dissemination block, and latitude, longitude) based on postal codes. It is consistent and logical in the way it does this. Any incorrect coding due to errors in the underlying reference files can easily be corrected once identified. To do such coding by manual methods would require highly skilled coders with much time and access to the full mailing address or property description. Even so, the results of manual coding would tend to be less accurate (particularly in urban areas), and they could inadvertently introduce systematic bias (especially in rural areas)"-- Abstract. supplements field exercises. This report offers guidance for using the PC-based Unit Performance Assessment System (UPAS) to collect and analyze data from SIMNET exercises. This report is an updated version of ARI Research Product 92-02 accomplished to reflect the addition of new features and utilities during the application of UPAS as a training research tool. Additions to the UPAS include: company-level versions of existing platoon-level displays; a new type of map display (the Fire Fight) to better analyze how fires are distributed over space; a Fire Fight display; an After Action Review (AAR) Presentation Manager to capture, add comments to, and sequence data displays for an AAR or electronic Take Home Package; a mouse interface; the option to display an aggregate icon at platoon level; and the capability to display line-of-sight information. TCRP Report 132: Assessment of Hybrid-Electric Transit Bus Technology provides decisionmaking guidelines coupled with a comprehensive life cycle cost model (LCCM) to assist transit managers in evaluating, selecting, and implementing hybrid-electric technology options for transit buses. The guidelines and the accompanying LCC model resulted from the gathering of site data coupled with a comprehensive review of both capital requirements and operating costs of hybrid-electric buses in comparison with those powered by traditional diesel engines.

Information grew out of a sound, engineering-based, independent technical evaluation of the costs, performance, and reliability of hybrid-electric transit bus technology in actual service. The LCC model, contained on the accompanying CD-ROM (CRP-CD-71), allows the user to compare the total life cycle costs across several cost categories for up to 6 different "purchase scenarios." These scenarios let the user decide when the purchases will be made, the types of buses to be compared, the work load of the buses, and many other cost inputs in determining benefits and costs associated with alternative purchasing strategies.
