Political Science Research in Practice Jul 25 2020

Nothing rings truer to those teaching political science research methods: students hate taking this course. Tackle the challenge and turn the standard research methods teaching model on its head with Political Science Research in Practice. Akan Malici and Elizabeth Smith engage students first with pressing political questions and then demonstrate how a researcher has gone about answering them, walking through real political science research that contributors have conducted. Through the exemplary use of survey research, experiments, field research, case studies, content analysis, interviews, document analysis, statistical research, and formal modeling, each chapter introduces students to a method of empirical inquiry through a specific topic that will spark their interest and curiosity. Each chapter shows the

process of developing a research question, how and why a particular method was used, and the rewards and challenges discovered along the way. Students can better appreciate why we need a science of politics--why methods matter--with these first-hand, issue-based discussions. The following features make this an ideal teaching tool: An introductory chapter that succinctly introduces key terms in research methodology Key terms bolded throughout and defined in a glossary Broad coverage of the most important methods used in political science research and the major subfields of the discipline A companion website designed to foster online active learning An instructor's manual and testbank to help incorporate this innovative text into your syllabus and assessment.

Cooperation In Science And Technology Jan 19 2020
The U.S.-USSR Agreement on Cooperation in the Fields of Science and Technology (the S&T Agreement), a major program of scientific and technical cooperation with the Soviet Union, brought about a broadening of the scope of cooperation and an increase in the number of scientists participating in such exchanges. This book takes a retrospective look at the U.S. experience under the agreement. The background, objectives, organizational arrangements, and

evaluations of specific projects are examined within the context of the scientific community and the concerns of the two governments. The authors discuss the relative success of the agreement and propose ways in which the scientific and political benefits could be increased.

Library and Information Studies for Arctic Social Sciences and Humanities Oct 28 2020 Library and Information Studies for Arctic Social Sciences and Humanities serves as a key interdisciplinary title that links the social sciences and humanities with current issues, trends, and projects in library, archival, and

information sciences within shared Arctic frameworks and geographies. Including contributions from professionals and academics working across and on the Arctic, the book presents recent research, theoretical inquiry, and applied professional endeavours at academic and public libraries, as well as archives, museums, government institutions, and other organisations. Focusing on efforts that further Arctic knowledge and research, papers present local, regional, and institutional case studies to conceptually and empirically describe real-life research in which the authors are engaged. Topics covered include the complexities of developing and managing multilingual resources; working in geographically isolated areas; curating combinations of local, regional, national, and international content collections; and understanding historical and contemporary colonial-industrial influences in indigenous knowledge. Library and Information Studies for Arctic Social Sciences and Humanities will be essential reading for academics, researchers, and students working the fields of library, archival, and information or data science, as well as those working in the humanities and social sciences more generally. It should also be of great interest to librarians, archivists, curators, and information or data professionals around the globe.
