Wired for Thought Feb 17 2020 In this age of hypercompetition, the Internet constitutes a powerful tool for inventing radical new business models that will leave your rivals scrambling. But as brain scientist and entrepreneur Jeffrey Stibel explains in *Wired for Thought*, you must understand its true nature. The Internet is more than just a series of interconnected computer networks: it's the first real replication of the human brain outside the human body. To harness its power, you first need to understand how the Internet has evolved to take on a similar brain. This engaging and provocative book provides the answer. Stibel lays out: - How the Internet-and online business opportunities-will look like in the future - What the next stage of artificial intelligence will be and what opportunities it will present for businesses Stibel shows how exceptional companies are using their understanding of the Internet's brainlike power to create competitive advantage-such as building more effective Web sites, predicting consumer behavior, leveraging social media, and creating a collective consciousness.

Bank 3.0 Sep 18 2022 The first edition of *BANK 2.0*—#1 on Amazon's bestseller list for business and finance in the US, UK, Germany, France, and Japan for over 18 months—took the financial world by storm and became synonymous with disruptive customer behaviour, technology and new banking models. In *BANK 3.0*, Brett King brings the story up to date with the latest trends redefining financial services and payments—from the global scramble for dominance in the mobile wallet and the expectations created by tablet computing to the operational challenges of the cloud, the explosion of social media, and the rise of the de-banked consumer, who doesn't bank at all. *BANK 3.0* shows that the gap between customers and financial services providers is rapidly widening, leaving massive opportunities for new, non-bank competitors to totally disrupt the industry. "On the Web and on Mobile, the customer isn't king—he's dictator. Highly impatient, skeptical, cynical. Brett King understands deeply what drives this new hard-core customer. Banking professionals would do well to heed his advice." —Gerry McGovern, author of *Killer Web Content*

Advances in Big Data Analytics Oct 07 2021 Today, big data affects countless aspects of daily lives. This book provides a comprehensive and cutting-edge study on big data analysis based on the research findings and applications developed by the author and his colleagues in related areas. It addresses the concepts of big data analytics and/or data science, machine learning optimization for learning, expert and rule-based data analysis, support vector machines, classification, feature selection, data stream analysis, learning analysis, sentiment analysis, and evaluation analysis. Deniable Trust Jun 15 2022 Audits, FDIC and Glass-Steagall have been replaced with annuities, sub-prime, and multi-million dollar a year CEOs. Banks and regulatory agencies are in disarray, and the financial impact is being felt in corporate boardrooms and couples' bedrooms everywhere. Jamie Wilde realizes his personal and professional life is in crisis and the only way to survive is to combat a CEO and his army of finance and security personnel. After twenty-two years of mergers, the ebb and flows of the economy and executives' harebrained ideas has taken its toll. Jamie knows the next predicament may come from any direction and someone must slow the decay of the organization and corporate values before they bring down the bank and its customers. He is literally in the battle of his life.

Introduction to Digital Transformation Jul 16 2022 This book aims to inform the non-IT specialist about the technological revolution that is taking place and, specifically, how the digital component of it is affecting our lives. It is hoped that this information will fill previous information gaps in readers' mental model, enabling them to make better-informed decisions. This book can also be used as a textbook in a stand-alone introductory course to the digital revolution and its effects on society. The course could be used in both bachelor and master degree programs in business management, healthcare management, sociology, or any other related IT programs. Chapter 1. This chapter, although the longest, is a brief review of the interrelationships between technology, economy, and politics. The subject is a much neglected one, and I

that understanding of these interactions is vital for understanding the underlying causes of our most important pressing issues. The chapter discusses the interactions between technologies, economy, and politics, examining the effect of technologies on economic development and political ideologies. Chapter 2. This chapter deals with technological revolutions in general and the digital revolution in particular. I shall discuss the components of the digital economy. These being: knowledge, digitisation, virtualisation, molecularization, integration/internetworking, disintermediation, convergence, innovation, sharing economy, immediacy, and discordant. In addition, we shall examine the disruptors that are changing the face of competition in the marketplace. Chapter 3. This chapter deals with digital transformation, i.e., the process of using digital technology in all areas of business, changing the way the businesses operate and deliver value to their customers. We shall examine strategies for dealing with digital transformation. Chapter 4. We shall examine one of the most important developments of the 21st century, namely the advancements in Artificial Intelligence (AI). We shall look at how the human brain works and what is intelligence. We shall look at the neural networks, machine learning, and deep learning. We shall also look at the deployment of AI in various fields such as healthcare, finance, Natural Language Processing (NLP), news media, and warfare. Chapter 5. This chapter deals with one of the most controversial and promising developments in finance and distributed secure databases, namely cryptocurrencies and blockchains. This subject is divided into two parts — the first part deals with the cryptocurrencies, and their viability as currencies. One of the most popular cryptocurrencies, the Bitcoin, will be examined in depth. The second part is somewhat technical and deals with the inner workings of the blockchains. As with cryptocurrencies, many see a bright future for blockchains, especially in the form of smart contracts. Many believe that blockchains will have great value in areas such as finance, handling contracts, healthcare and more. Blockchain promises to bring disintermediation to many industries and thereby reduce costs. Chapter 6. Technological revolutions tend to disrupt the lives of many middle-aged and older workers. New technologies give birth to new industries, destroying the old industries in the process. New technologies often require special skills that the old industry workers do not possess. Displaced workers of the old industries can seldom find jobs in new industries since the new industries often rely on new technologies and skills that the old-industry workers do not possess. Displaced workers need training, something that the prospective employers do not provide. Also, new technologies, including AI, are automating many tasks, reducing the need for human workers. This chapter discusses the issue of automation and its effect on employment. Additionally, the type of jobs that are in danger of automation is discussed as well. Chapter 7. While chapter 6 discussed the employment situation, chapter seven considers the type of education required for the new industries. Also, the weaknesses of the existing educational system are considered and alternative systems are proposed. Chapter 8. History tells us that whenever there has been a technological revolution, it has been accompanied by a shift in power, both nationally and internationally. The global shift of power has seldom been a peaceful affair. It often has resulted in major wars and global reorientation. This chapter discusses the possibility of the global shift of power. Currently, there are not that many countries or entities that can be considered as contenders. Of the three, Russia, European Union, and China, only one, China, is considered

have any chance of wresting power from the United States. The technological, economic and military power of China is compared and contrasted with the United States'.

Privacy and Identity Management Nov 20 2022 This book contains selected papers presented at the 15th IFIP WG 9.2, 9.6/11.7, 11.6/SIG 9.2.2 International Summer School on Privacy and Identity Management, held in Maribor, Slovenia, in September 2020.* The 13 full papers included in this volume were carefully reviewed and selected from 21 submissions. Also included is a summary paper of a tutorial. As in previous years, one of the goals of the Summer School was to encourage the publication of thorough research papers by student and emerging scholars. The papers combine interdisciplinary approaches to bring together different perspectives, such as technical, legal, regulatory, socio-economic, social or societal, political, ethical, anthropological, philosophical, or psychological perspectives. *The summer school was held virtually.

Information Retrieval Oct 19 2022 This book is an essential reference to cutting-edge issues and future directions in information retrieval. Information retrieval (IR) can be defined as the process of representing, managing, searching, retrieving, and presenting information. Good IR involves understanding information needs and interests, developing an effective search strategy, technique, system, presentation, distribution and delivery. The increased use of the Web and wider availability of information in this environment led to the development of Web search engines. This change has brought fresh challenges to a wider variety of users' needs, types of information. Today, search engines are seen in enterprises, on laptops, in individual websites, in library catalogues, and elsewhere. Information Retrieval: Searching in the 21st Century focuses on core concepts, and current trends in the field. This book focuses on: Information Retrieval Models User-centred Evaluation of Information Retrieval Systems Multimedia Resource Discovery Image Users' Needs and Searching Behaviour Web Information Retrieval Mobile Search Context and Information Retrieval Text Categorisation and Genre in Information Retrieval Semantic Search The Role of Natural Language Processing in Information Retrieval: Search for Meaning and Structure Cross-language Information Retrieval Performance Issues in Parallel Computing for Information Retrieval This book is an invaluable reference for graduate students on IR courses or courses in related disciplines (computer science, information science, human-computer interaction, and knowledge management), academic and industrial researchers, and industrial personnel tracking information search technology developments to understand the business implications. Intermediate-advanced level undergraduate students on IR or related courses will also find this text insightful. Chapters are supplemented with exercises to stimulate further thinking.

Cyberspace Law May 22 2020 This book explores what the American Civil Liberties Union calls the "third era" in cyberspace, in which filters "fundamentally alter the architectural structure of the Internet, with significant implications for free speech." Although courts and nongovernmental organizations increasingly insist upon constitutional and other legal guarantees of a freewheeling Internet, multi-national corporations compete to produce strategies for making it more predictable. When Google attempted to improve our access to information containing in books and the World Wide Web, copyright litigation began to impede the process of making content searchable, and resulted in the wrongful removal of accounts of thousands if not millions of works. Just as the courts were insisting that using trademarks to criticize their owners is First Amendment-protected, corporations and trade associations accelerated their development of ways to make Internet companies liable for their users' infringing words and actions, potentially circumventing free speech rights. And as social networking and content-sharing sites have proliferated, so have the terms of service and detecting tools for detecting, flagging, and deleting content that makes one or another corporation or trade association fear for its image or profits. The book provides a legal history of Internet regulation since the mid-1990s, with a particular focus on efforts by patent holders, trademark, and copyright owners to compel Internet firms to monitor their online offerings and remove or pay for any violations of the rights of others. This book will be of interest to scholars of law, communications, political science, government and policy, business, and economics, as well as anyone interested in free speech and commerce on the internet.

Inclusive Finance in China Mar 20 2020 This book explores for the first time the world of digital finance, Chinese startups, and the digitalization of the Chinese economy. Through the case studies such as the Ant Financial Services Group, CFPA Microfinance, micro-financial projects of China Minsheng Bank, Meixing in Nanchong, and more, this book introduces the practical experience and exploration in the recent years from the perspectives of microfinance, financing of small and medium sized enterprises, digital inclusive finance, and credit. From the perspective of enterprise management, it especially integrates an enterprise's task, vision, and value into the design of the organization process, deeply explores how to realized the double bottom lines of social and financial performances, manifests how microfinance's marginal cost is reduced by digital finance such as data, internet, cloud computing, artificial intelligence and the advantages of digital finance in providing convenient, low-cost, and touchable service, and discusses the technological bonus to small-amount, decentralized, and large-quantity microfinance. Bank 4.0 (Jan 18 2020) Winner of best book by a foreign author (2019) at the Business Book of the Year Award organised by PwC Russia The future of banking is already here — are you ready? Bank 4.0 explores the radical transformation already taking place in banking, and follows it to its logical conclusion. What will banking look like in 30 years? 50 years? The world's best banks have been forced to adapt to changing consumer behaviors; regulators are rethinking friction, licensing and regulation; Fintech start-ups and tech giants are redefining how banking fits in the daily life of consumers. To survive, banks are having to develop new capabilities, new jobs and new skills. The future of banking is not just about new thinking around value stores, payment and credit utility — it's embedded in voice-based smart assistants like Alexa and Siri and soon smart glasses which will guide you on daily spending and investment decisions. The coming Bank 4.0 era is one where either your bank is embedded in your life via tech, or it no longer exists. In this final volume in Brett King's BANK series, we explore the future of banks amidst the evolution of technology and discover a revolution already underway. From re-engineered banking systems, to selfie-pay and self-driving cars, Bank 4.0 proves we're not on Wall Street anymore. Bank 4.0 will help you: Understand the historical pressures that flag a fundamental rethinking in banking Discover low-friction, technology experiences that undermine the products we sell today Think through the evolution of identity, value and money as cash and cards become obsolete Learn how Fintech and tech "disruptors" are using behavioral science, psychology and technology to reshape the economics of banking Examine the technologies in which blockchain, A.I., augmented reality and other leading-edge tech are the real building blocks of the future of banking systems If you look at individual technologies or startups disrupting the space, you might miss the biggest signposts to the future and you might think that most of what we've learned about banking the last 700 years just isn't useful. When the best bank in the world isn't any of the names you'd expect, when branch networks are a liability instead of an asset, and when advice is the domain of Artificial Intelligence, we may very well have to start from scratch. Bank 4.0 takes you to a world where banking will be instant, smart and ubiquitous, and where you'll have to adapt faster than ever before just to survive. Welcome to the future.
